

Viktor Hrekh

About me

I'm a passionate developer and an idealist who is always willing to learn new things. I'm not afraid of challenges. I've learned a lot by working with people all around the globe on projects radically different. I love to experience new things and meet new people. What I prefer above all is to put into practice what I learn. Also, I'm a stubborn person which means that I am eager to finish the projects I start. I never drop something before trying a lot of different ways and ideas to make it. I like improve things I can. I prefer practice to theory – not without but not only. Active, cheerful and motivated to engage time with a team for joint achievements. I love programming.

Experience

Since start of my career I've been working as a Freelancer about a year on different kinds of projects using the next languages and frameworks. Frontend written in Typescript using AngularJS. Backend written in Kotlin using Ktor. Android applications written in pure Kotlin using the best practices and following the Material design guidelines. On the database part I have experience of work with MySQL, PostgreSQL, Redis. Dependency injection using Koin framework or KodeIn library. BASH scripting (automatisation of some kind of developer routines). IntelliJ Idea minimal plugins to speed up development processes.
